SUN: System administrator for the Solaris 8, part II, Moscow
SUN: Sun Enterprise Server Maintenance, Moscow

2001

CBOSS: Billing system administrator, Moscow

SKILLS & QUALIFICATIONS

Delphi, Java, PHP

In recent years most of my application and server development has been done in Delphi with the SQL request to Oracle database. I have experience with various developer's packages and interfaces. I can read and modify Java and PHP code.

SQL, Databases

I have used MySQL, Oracle, PostgreSQL, MSSQL and dBase. I am, by far, most experienced with Oracle as the database of choice in my current job and have lots of experience running it in a mission critical environment. From the application point of view, I have used the ODBC/ODA/JDBC interfaces.

Linux, Unix

I have experience with Linux from 2005. Over the years, I have had experience with Sun Solaris 8/10.

Assembly

I was programming small programs for the 8086 CPU when I was 14 years old. Additionally, I developed good reverse engineering

skills. Assembly is, however, not something I use frequently anymore.

Network

I have a lot of experience with Ethernet based networks; from the physical cabling and network design, to security of IP based networks. I have a good knowledge of TCP, UDP network protocols and I am proficient at troubleshooting any such problems.

I have experience with Lucent 5ESS, Ericsson AXE-10 and Huawei. In my spare time, I am currently focusing my studies on networking in Linux.

Quick Learner

I am a quick learner. I hunger for new technical knowledge and love learning new things. I also love being the one people go to when they have an obscure problem that seems impossible to fix. My goal is to know something about everything and everything about some things.

Interests

Mountain-biking, fencing, traveling, photography, remote-controlled helicopters.

Languages

Russian (native), English (fluent), Norwegian (very good)
